RUNPOD PROOF OF USE

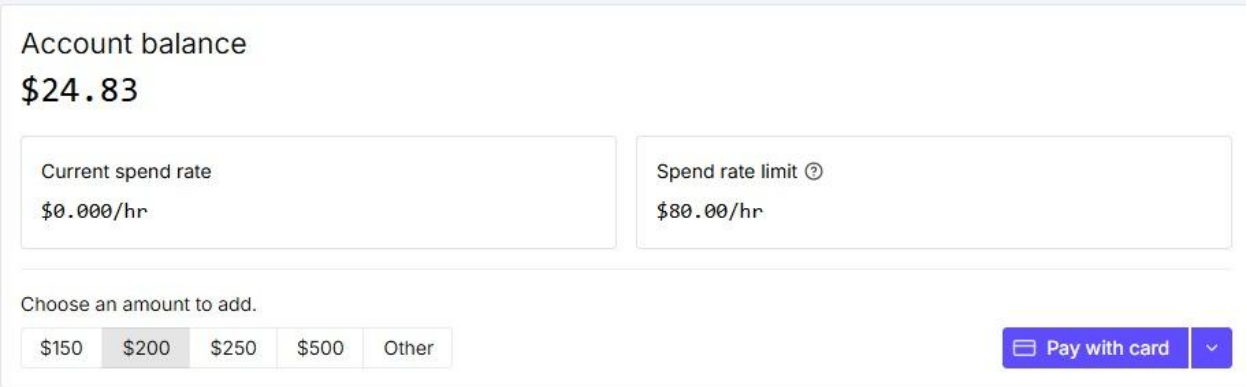

Figure 1: RunPod account billing dashboard displaying an available balance of USD 24.83, a current expenditure rate of USD 0.00 per hour, and an account spending limit of USD 80.00 per hour, demonstrating access to RunPod's cloud computing services.

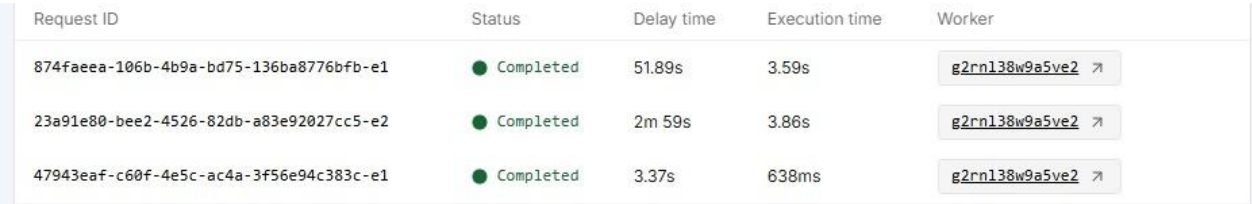

Figure 2: RunPod Serverless request history displaying successfully completed AI inference jobs, including unique request identifiers, execution durations, processing delays, and assigned worker identifiers, providing evidence of actual model inference execution.

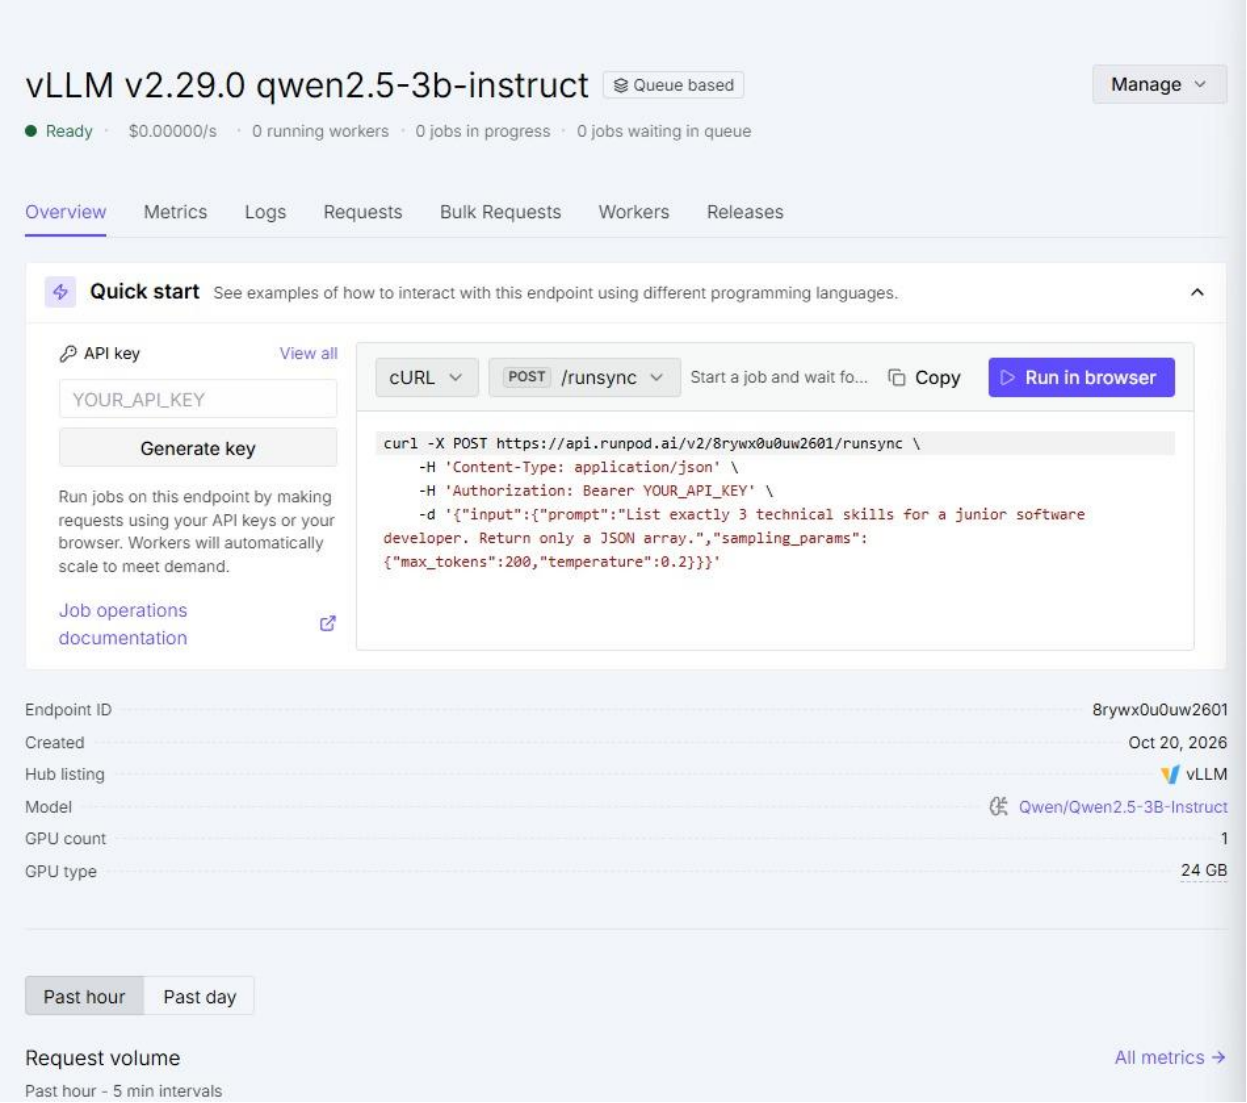

Figure 3: RunPod Serverless endpoint overview displaying the deployed Qwen/Qwen2.5-3B-Instruct language model running on vLLM v2.29.0, configured with one GPU and 24 GB of GPU memory, demonstrating the AI inference infrastructure established for SkillShift AI's optional learning-roadmap personalization.

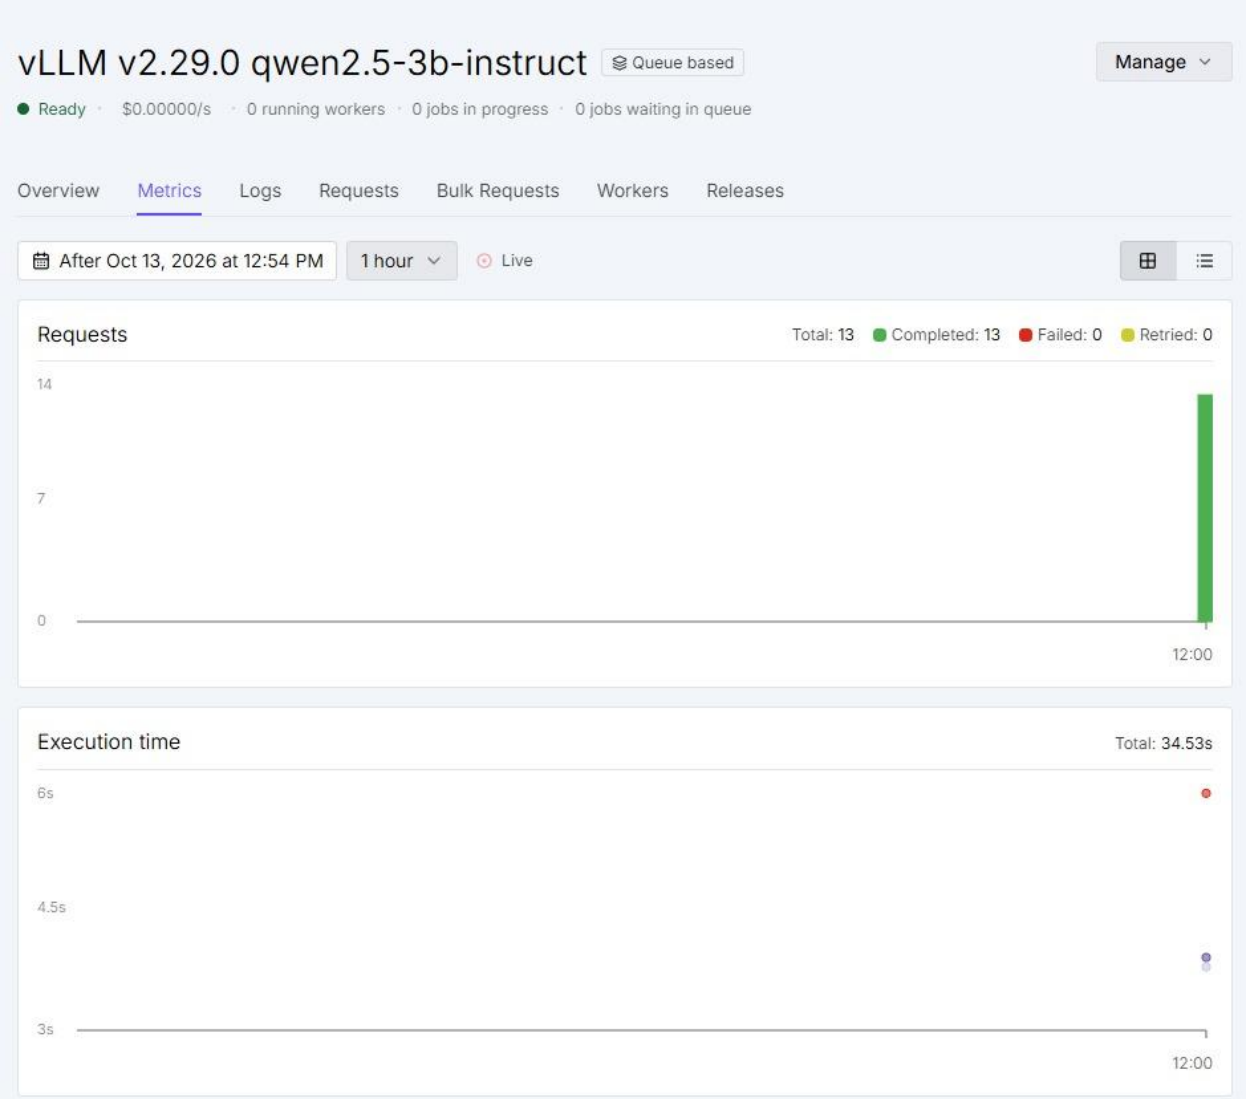

Figure 4: RunPod Serverless metrics dashboard displaying 13 successfully completed AI inference requests, zero failed requests, zero retries, and a cumulative execution time of 34.53 seconds, providing measurable evidence of AI model usage and successful inference processing.

Figure 5: RunPod Serverless Workers dashboard showing an active inference worker configured with a PRO 6000 MIG 24GB GPU, including the worker identifier, hosting region, allocated computing resources and recorded uptime, providing evidence of the GPU infrastructure used to execute Qwen2.5-3B-Instruct.

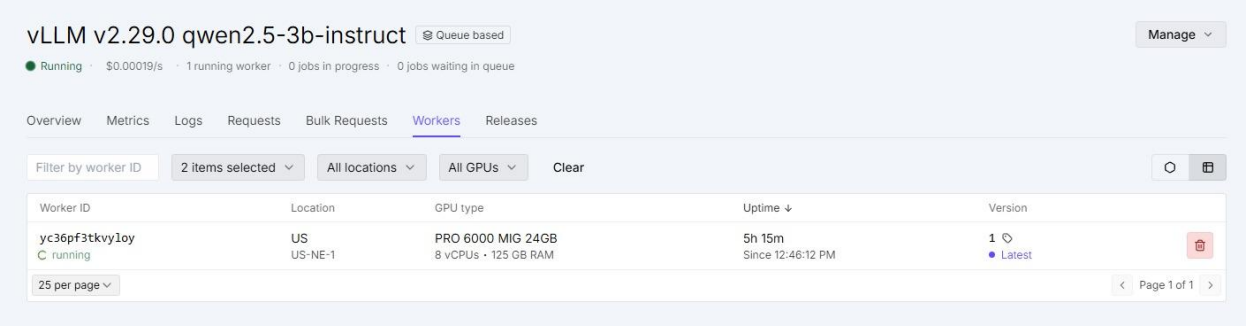

Figure 6: RunPod Serverless endpoint overview displaying the Qwen2.5-3B-Instruct model hosted through vLLM v2.29.0, the configured endpoint identifier, 24 GB GPU allocation and active inference worker status, demonstrating the model deployment and runtime environment.
